

STRAWPOLL

STRAWPOLL is a polling system specifically designed to create these tools quickly, simply, and accessibly. <https://strawpoll.com/>

Characteristics

- No registration is required for either the survey creator or the participants.
- The system is completely free.
- It allows for the creation of surveys with multiple response options and includes a feature for scheduling team meetings.
- Simple interface for both desktop and mobile devices.
- Recently updated with improvements and added features.
- The system allows for real-time result updates.

Functions

- Simple poll: create single- or multiple-choice polls and generate pie charts showing the results. Options include anonymous or identified participation, private or public settings, response deadlines, image attachments, and security configurations.
- Schedule meetings: set up time slots across one or more days so participants can indicate their availability, allowing a date and time to be chosen that suits the greatest number of participants.

Educational uses

- Agree on key dates with students: exams, assignments, etc.
- Assess knowledge acquisition after a lesson.
- Evaluate prior knowledge before a lesson.

Advantages

- The simplicity and immediacy of the interface.
- No registration required for students or participants.
- All participants can view the results.
- Easy to share and distribute to students.

Disadvantages

- The system is currently entirely in English.
- It only supports one type of question: multiple-choice. It does not support open-ended questions, Likert scales, etc.
- As it is free to access, advertisements appear.
